LinkedIn: <https://linkedin.com/in/feifanhe>

## EDUCATION

---

- **Master of Science in Computer Science (GPA: 3.85)** - Brandeis University
- **Bachelor of Commerce (Graduated with Distinction)** - University of Toronto

## WORK EXPERIENCE

---

**Associated Environmental Systems** - Software Engineer Intern (*Jun 2023 - Aug 2023*) *Massachusetts, US*

Created a chamber research solution comprising a data visualizer, report generator, and a user-friendly dashboard.

Backend: *Node.js, Express.js, InfluxDB*, and *MongoDB*. Frontend: *Next.js, React.js*, and *Tailwind CSS*.

- Implemented data cleaning, parsing, and reduction techniques, achieving a 35% reduction in storage.
- Developed content management system to enable versioning, PDF exporting, and the read-only publication of reports, resulting in a 50% improvement in the lab report process and facilitating efficient collaboration.
- Leveraged a data reduction technique that remediates the app from frequently crashing due to loading too many data points, and improves the chart rendering speed by 40%.
- Created automated tests to enhance reliability and worked closely with product managers to ensure that the delivered features aligned with user requirements within the agile development cycle.
- Designed and implemented the CI/CD pipeline to automate the build and test process.

## PROJECTS

---

- **Student Employment Website:** A full-stack project aimed at fostering a vibrant community among students and potential employers. This platform integrates user management and authentication, job postings, and event hosting. Notable features include a RESTful API, responsive design, and real-time chat through WebSocket integration. - *TypeScript, JSON, NoSQL, Bootstrap, Socket.io*.
- **Multi-threaded Shell Simulator:** An application that simulates a shell environment, capable of executing Linux commands with arguments, handling inputs, and producing output. Leveraging concurrency and piping, it can transform input and give results efficiently. <https://github.com/feifan-he/Shell-Simulator> - *Java, OOP*
- **AVL Tree Scorekeeper:** A scorekeeping application that leverages an AVL tree as the underlying data structure for efficient search time. <https://github.com/feifan-he/AVL-Tree> - *Java, OOP*
- **Sudoku Generator:** An application capable of generating empty Sudoku boards along with solutions of different difficulty levels. <https://github.com/feifan-he/Sudoku-Generator> - *Python*
- **Automated Trading via Telegram:** A live trading algorithm with Telegram integration that runs on Google Cloud Platform. <http://feifanhe.com/algo-trading> - *Python*

## SKILLS

---

- **Languages:** Python | Java | JavaScript | TypeScript | CSS | HTML | Bash | Node.js | Express.js | SQL
- **Frameworks:** Angular | React | Next.js | jQuery | Django | Flask | Spring Boot | Socket.io | Bootstrap
- **Cloud/Tools:** GCP | AWS | Git | Docker | Kubernetes | Jenkins | Bitbucket | Jira | Postman | Mocha | Chai
